Vulnerabilities (CVEs)

ID	Severity	CVSS	Description
CVE-2008-4471	High	9.3	Directory traversal vulnerability in the CExpressViewerControl class in the DWF Viewer ActiveX control (AdView.dll 9.0.0.96), as used in Revit Architecture 2009 SP2 and Autodesk Design Review 2009, allows remote attackers to overwrite arbitrary files via "..\" sequences in the argument to the SaveAS method.
CVE-2008-4472	High	9.3	The UpdateEngine class in the LiveUpdate ActiveX control (LiveUpdate16.DLL 17.2.56), as used in Revit Architecture 2009 SP2 and Autodesk Design Review 2009, allows remote attackers to execute arbitrary programs via the second argument to the ApplyPatch method.
CVE-2008-5426	Medium	4.3	Kaspersky Internet Security Suite 2009 does not properly handle (1) multipart/mixed e-mail messages with many MIME parts and possibly (2) e-mail messages with many "Content-type: message/rfc822;" headers, which allows remote attackers to cause a denial of service (stack consumption or other resource consumption) via a large e-mail message, a related issue to CVE-2006-1173.

ID	Severity	CVSS	Description
CVE-2009-0066	High	7.6	Multiple unspecified vulnerabilities in Intel system software for Trusted Execution Technology (TXT) allow attackers to bypass intended loader integrity protections, as demonstrated by exploitation of tboot. NOTE: as of 20090107, the only disclosure is a vague pre-advisory with no actionable information. However, because it is from a well-known researcher, it is being assigned a CVE identifier for tracking purposes.
CVE-2008-3979	Medium	5.5	Unspecified vulnerability in the Oracle Spatial component in Oracle Database 10.1.0.5 and 10.2.0.2 allows remote authenticated users to affect confidentiality and integrity via unknown vectors. NOTE: the previous information was obtained from the January 2009 CPU. Oracle has not commented on reliable researcher claims that this issue is a SQL injection vulnerability that allows remote authenticated users to gain MDSYS privileges via the MDSYS.SDO_TOPO_DROP_FTBL trigger.
CVE-2008-5440	High	7.5	Unspecified vulnerability in the TimesTen Data Server component in Oracle Database 7.0.5.0.0 allows remote attackers to affect confidentiality, integrity, and availability via unknown vectors. NOTE: the previous information was obtained from the January 2009 CPU. Oracle has not commented on reliable researcher claims that this is a format string vulnerability via the msg parameter in the evtdump CGI module.
CVE-2019-1185	High	7.3	An elevation of privilege vulnerability exists due to a stack corruption in Windows Subsystem for Linux. An attacker who successfully exploited the vulnerability could execute code with elevated permissions. To exploit the vulnerability, a locally authenticated attacker could run a specially crafted application. The security update addresses the vulnerability by correcting how Windows Subsystem for Linux handles objects in memory.

Severity Summary

Severity Level	Count	Status
Unknown	7	DETECTED
